Dialog Plus Solves The Power Issues For IP Telephony and Power Over Ethernet Users

The new Dialog Plus from Riello Galatrek is an on-line uninterruptible power supply specifically designed to solve the power protection problems facing Voice over IP telephony and Power over Ethernet technologies. Both offer a host of benefits which power disruptions can dramatically remove.

Power over Ethernet (PoE) is a way of providing electrical power to network ports along existing category 5 10BaseT and 100Base-TX Ethernet cabling. From the ports compatible equipment such as a PoE compatible telephone handsets, cameras and security devices can be powered, managed and controlled. Voice over IP (VoIP) telephony is a way of providing unified messaging and communication over remote IP addresses with resultant cost savings and efficiencies over traditional telephony.

Robin Koffler, General Manager for Riello Galatrek Ltd commented:

“Voice over IP and Power over Ethernet technologies require the application of multiple hardware devices all of which must be powered continuously. Their reliability is affected by surges and power failures and organisations employing them must adopt a suitable power protection strategy. Our latest generation Dialog Plus specifically solves these issues.”

The new Dialog Plus is available in 700VA to 3000VA power modules and both floor standing and 19” rack mount formats to offer the maximum number of installation options. The UPS have been designed to occupy the smallest possible foot prints and rack heights for an on-line UPS. The 3000VA rack mount unit at 2U high is 50% smaller than previous models.

new product release

release date: immediate

from Riello Galatrek - UK subsidiary of Riello UPS Manufacturing

Each UPS has a number of output sockets from which uninterruptible power can be drawn continuously. The 3000VA model is capable of powering up to 6 separate devices such as file servers, PBXs, PoE enabled network switches, advanced telephony handsets, cameras and security devices.

To provide power failure protection Dialog Plus is available with a standard internal battery which will typically run for 13 minutes at full load. This can be extended using modular battery packs to over 7 hours. Fast recharge times have also been catered for. The modular battery packs can be recharged in less than 8 hours and automatic battery testing and management help to prolong their working life.

For remote management and control each Dialog Plus has an informative front panel LED display, RS232 port and communications expansion slot. The RS232 port allows remote management using the PowerShield² software supplied with each UPS over a local area network or for data centre usage, the more sophisticated PowerNetGuard package. The communications expansion slot is compatible with the Riello UPS range of cards to provide SNMP, MODBUS/JBUS, serial duplex communications.

The new Dialog Plus comes with a 2 year warranty, software configuration pack, PowerShield² software on CD-ROM and connection cables. The range starts from £499.00 plus delivery and VAT.
